EDUCATION

University of British Columbia

Bachelor of Science in Computer Science

Vancouver, BC

May 2028

- **Coursework:** Data Structures & Algorithms, Object-Oriented Design, Operating Systems, Networking, Databases

EXPERIENCE

Ericsson

AI Software Engineer Intern

Sep. 2026 – Dec. 2026

Toronto, ON

- Engineered **Jenkins CI/CD** pipelines by decomposing **monolithic** build workflows into parallelized stages, reducing build times by **30%** and accelerating developer feedback across the software development life cycle.
- Built an **AI-assisted CI/CD** workflow that processed **100+ Jenkins** build failures, analyzed logs, validated code fixes, and generated **GitLab** merge requests to reduce manual debugging and improve release recovery time.
- Designed and integrated **Java/Spring Boot** services with **Docker** and **Kubernetes**, automating build, test, and deployment workflows across **5+** services to improve release consistency, scalability, and reliability.

Morgan Stanley

Software Engineer Intern

May 2026 – Aug. 2026

Calgary, AB

- Developed **Java** microservices and memory-efficient **C++** data pipelines for a wealth-management platform serving **18M+** global clients.
- Reduced user-reported dashboard errors by **15%** by diagnosing **API** resiliency failures and developing **Java/C++** backend improvements, improving reliability for wealth-management platform users.
- Decoupled portfolio data workflows by developing **Kafka** producers and consumers for **Java** microservices, improving data-processing reliability by **30%** through fewer processing failures and achieving **50%** higher successful event delivery.

Atlas Power Technologies Inc.

Software Engineer Intern

May 2025 – Apr. 2026

Vancouver, BC

- Implemented Time-Sensitive Networking (**TSN**) protocol software in **C** across embedded boards, achieving **99%** transmission reliability for industrial data infrastructure used by clients including **Meta** and **Williams Group**.
- Built a **C#/.NET** full-stack system that ingested and processed real-time embedded hardware streams, reducing end-to-end data latency to under **20 ms** for enterprise performance requirements.
- Designed a hybrid **TCP/UDP** communication layer, using **UDP** for latency-sensitive telemetry and **TCP** for reliable command-and-control traffic, improving real-time resilience and reducing packet loss by **50%**.

UBC SAE AeroDesign

Lead Software Engineer

Sep. 2025 – Present

Vancouver, BC

- Contributed to a **VTOL** aircraft's autonomous payload detection and capture system through **computer-vision** and **flight-system integration**, helping the team secure **2nd** place at the SAE East AeroDesign Competition.
- Achieved **95%** payload detection accuracy at **30 FPS** by fine-tuning a pre-trained **YOLOv8** model on a custom **400-image** dataset over **50** epochs, meeting real-time demands under competitive flight conditions.
- Enabled real-time flight corrections at **10 Hz** by developing a **Python** script that calculates error vectors and transmits adjustments via telemetry radio with a latency of less than **100 ms** during active competition flights.

PROJECTS

Transit Pulse | *Python, Databricks, Lakeflow Pipelines, XGBoost, MLflow, Next.js, React*

[GitHub](#)

- Won the Databricks × Rogers Hackathon by building TransitPulse, a crowd-forecasting platform that processed cell-tower data with **Databricks Lakeflow** and **Python** to train an **XGBoost** quantile model forecasting Waterfront demand.
- Implemented event-focused transit planning with **MLflow**, **Databricks Model Serving**, and **Next.js/React**, delivering **48** demand predictions/day to identify surge windows and enable proactive bus, SkyTrain, and SeaBus allocation.

Virtual Reality AI Assistant | *Python, LangChain, LangGraph, OpenAI Whisper, ElevenLabs*

[GitHub](#)

- Engineered a voice assistant local pipeline that processes **OpenWakeWord** and **Whisper** STT locally while streaming complex reasoning tasks to cloud **LLMs** via **Python asyncio** and **WebSockets**.
- Developed a decision engine capable of **8+** tasks by implementing a **LangGraph** state machine that routes queries between **Qwen VL** for visual analysis and **GPT** for semantic reasoning based on confidence scores.

TECHNICAL SKILLS

Languages: Python, Java, Go, C, C++, C#, TypeScript, JavaScript, SQL, HTML, CSS

Frameworks and Libraries: Spring Boot, React, JUnit, MSTest, LangChain, LangGraph, FAISS, WebSockets, Asyncio

Developer Tools: Kubernetes, Docker, Jenkins, IntelliJ, VS Code, Git, Jira, Postman, Kiro, Claude Code

Cloud: AWS EC2, S3, Lambda, RDS, DynamoDB, CloudWatch
